

8 Battery Cabinet Purchase Contract Agreement

What is the general contracting structure for a battery energy storage system?

The first, and the topic of an earlier article, is the general contracting structure. Developers of battery energy storage system, or BESS, projects are using a multi-contractor, split-scope contracting structure instead of the more traditional single-contractor, turnkey approach. (See "Battery Purchase Contracts" in the December 2021 NewsWire.)

Should a battery procurement contract aggregate liability in a collective project?

For example, if a developer has a number of projects supplying battery storage under a single offtake contract, then it might prefer a single battery procurement contract aggregating liability in the collective project, given that liability under the offtake contract may be connected for failure to develop the collective project.

Can a developer supply a battery energy storage system?

In this context, a developer will often seek to enter into a supply agreement for the Battery Energy Storage System ("BESS"), which will then be supplied to the civil works contractor for installation and commissioning.

Why do battery operators have a floor price in a trading agreement?

While battery operators with a floor price in the trading agreement are guaranteed a minimum gain, their overall revenue split is lower because the market risk gets transferred to the trading party. Agreements containing a floor price typically have shorter tenors as the risk for the trading party increases with longer durations of fixed revenues.

Battery Energy Storage Purchase Agreement sample contracts and agreements.

Anyone developing a battery energy storage project should be prepared to address two main issues.
