

How is a transmitter station authorised in Austria?

This information relies on a joint initiative of the ministry and the mobile telecommunications operators. The authorisation to operate the transmitter station is granted according to the provisions of the Austrian Telecommunications Act. The authorisation process has to be distinguished from the process for the construction of such transmitters.

What is the Austrian Telecommunications Act?

The Austrian Telecommunications Act does not define its own threshold values but uses the recognised limit values in standards and other sources. The licenses for the transmitter stations in the wireless network of a mobile phone operator refer to these thresholds. Compliance with these thresholds is controlled by radio monitoring.

What is the Austrian broadband Atlas?

The Austrian Broadband Atlas is the central information platform on digital connectivity coverage in Austria. Using maps, the coverage for fixed and mobile digital connectivity networks as well as all funded project of the digital connectivity initiatives are made publicly accessible.
