

In this post, we'll dive into how far along California is in its solar journey and what the current energy mix is within the nation's most populous state. This will help you contextualize the energy needs of the ...

The ConsumerAffairs Research Team conducted an in-depth analysis to determine how much it costs to go solar in California and the average solar costs in other states.

The California Energy Commission licenses solar thermal plants above 50 megawatts and promotes solar photovoltaic installation through the Renewables Portfolio Standard, with building efficiency ...

Discover the leading inverter manufacturers in Caracas driving solar energy adoption across residential and commercial sectors. This guide explores market trends, key players, and practical insights for ...

The Solar Energy Industries Association predicts that California will increase its solar capacity by over 20,000 MW over the next five years, the second highest increase in solar capacity in the country ...

A solar installation with an average-sized backup battery can earn an additional \$6,700 (or more) in tax credits and rebates. California's solar incentives can reduce solar panel payback time to 8 years or ...

OverviewHistoryPhotovoltaicsSolar thermal powerGenerationGovernment supportState challenges with solar powerPublic opinionSolar power has been growing rapidly in the U.S. state of California because of high insolation, community support, declining solar costs, and a renewable portfolio standard which requires that 60% of California's electricity come from renewable resources by 2030, with 100% by 2045. Much of this is expected to come from solar power via photovoltaic facilities or concentrated solar power facilities.

Here is a map of all utility-scale solar farms in California. Hover over a solar farm to view information on each project like their name, capacity and construction date.

See how solar is growing in California with the latest data on capacity, installations, and trends shaping the state's future.

An enormous solar project is moving forward in California, on land that farmers have had to keep fallow as the state restricts over-pumping the aquifers they previously used to irrigate crops.

Octopus Energy will acquire a solar and storage project in California that is expected to be operational by July as part of its investment. The UK-based company, active across major markets in ...
