How do you mount solar panels on an RV roof?

Screw mounts require a wood layer under the rubber to attach to (very common on RV roofs). Be sure that the plywood is strong enough to hold the solar panels. If it is a thin layer of plywood, you will need to use multiple mounting feet for each panel (instead of the recommended number of 4 mounts per panel, use 8 or more).

How do you mount a solar panel to a roof rack?

You can use brackets to mount the solar panel to your rack, or you can bolt the solar panel frame directly to your roof rack: Bolting a solar panel to a rack is nice because you can usually find all the parts you need at a local hardware store. Be sure to buy stainless steel hardware.

Do you need a safety line to mount solar panels?

No matter how you decide to mount your solar panels, you need a safety line. This is a strong rope that connects your solar panels to each other, and to the roof of your vehicle. It takes 20 minutes to construct, and could possibly save a life.

How do you use VHB tape on a solar panel?

Another method to using VHB tape is to mount a long edge directly to the roof of your vehicle, and lift up the opposite edge a couple inches, and mount it to a piece of square metal tubing (so that the solar panel has air flow). This is a cheap and easy way to mount a solar panel, and it is super strong!
