

# Container frame manufacturers wholesale

A container, or software container, is a standalone package of software that bundles together application code with the operating system libraries and dependencies required to run it.

A container is any receptacle or enclosure for holding an item. Things kept inside of a container are protected on several sides by being inside of its structure.

A container is a standard unit of software that packages up code and all its dependencies so the application runs quickly and reliably from one computing environment to another.
