

Six-dimensional space photovoltaic panels

SpaceTech develops deployment mechanisms for deployable solar array structures to complete solar arrays, including photovoltaic assemblies, deployment mechanisms and electronics.

Rocket Lab's space qualified solar panel arrays meet the rigorous demands of space, delivering reliable and efficient power solutions for a wide variety of satellites.

Thin-film solar cells are promising for providing cost-effective and reliable power in space, especially in multi-junction applications. To enhance efficiency, robustness and integration,...

This review presents a comprehensive assessment of the development of flexible photovoltaic technologies for space applications, highlighting the evolution of solar cells, flexible ...

Spectrolab manufactures and tests fully-integrated solar panels for commercial, civil and defense missions. These solar panels are then delivered to satellite prime contractors for integration onto ...

Lockheed Martin's small satellite (smallsat) solar arrays are high-quality, 3D-printed panels available in multiple wing configurations. With power levels up to 2,000 W, and a cell layout configurable to any ...

The long-established performance of III-V solar cells makes them the standard in space-based PV. They hold energy conversion efficiency records and demonstrate world-class stability in high-radiation and ...

The Light Wing (TM) solar array's high-power-to-mass ratio and redeployment capability gives space disruptors unmatched power and mobility while reducing overall mission risk.

RD2 uses flat panels, with solar cells facing away from Earth and microwave emitters facing toward the Earth. RD2 generates power 60% of the year due to its limited capability to reposition itself or redirect ...
